

Odhady parametru populace

$$\mu: \left\langle \bar{x} - t_{n-1}(1 - \alpha / 2) \cdot \frac{s_x}{\sqrt{n}}; \bar{x} + t_{n-1}(1 - \alpha / 2) \cdot \frac{s_x}{\sqrt{n}} \right\rangle$$

$$\delta^2: \left\langle \frac{(n-1) \cdot s_x^2}{x_{n-1}^2(1 - \alpha / 2)}; \frac{(n-1) \cdot s_x^2}{x_{n-1}^2(\alpha / 2)} \right\rangle$$

Z populace s parametry μ a δ^2 jsme vybrali výběr, kde:

$$n = 16$$

$$\bar{x} = 20$$

$$s_x^2 = 64$$

Určete 95% pravděpodobnost při interval parametru μ a δ^2 .

$$\mu = \left\langle 20 - 2,13 \cdot \frac{8}{4}; 20 + 2,13 \cdot \frac{8}{4} \right\rangle = \langle 15,74; 24,26 \rangle$$

Z populace $N(\mu, \delta^2)$, $n = 81$, $\bar{x} = 200$, $s_x^2 = 169$. Určete 95% IS z μ a δ^2 .

$$\mu = \left\langle 200 - 1,99 \cdot \frac{13}{9}; 200 + 1,99 \cdot \frac{13}{9} \right\rangle = \langle 197,13; 202,67 \rangle$$

$$\delta^2: \left\langle \frac{80 \cdot 169}{107}; \frac{80 \cdot 169}{57} \right\rangle = \langle 126,4; 237,2 \rangle$$
